

## How To Increase Rework and Repair Productivity

### **It All Starts At The Bench.**

Individuals working on a product or project together need to easily communicate and share ideas, tools and work. The Quad Station from Production Basics is a smart workstation configuration for a work cell or team, keeping all the members in close proximity, while providing personal space.

“We recognize the importance of manufacturing efficiencies to the success of any business,” says Adam Wisnia, President of Production Basics. “We designed a workstation to help manufacturers accomplish their production goals and encourage greater productivity through assembly cells.”

The Quad Station configuration minimizes material handling and organizes tools, parts and components operators need to complete production tasks. Ergonomic accessories are added to create a functional production cell placing all components are within easy reach of the operator for optimal comfort and injury reduction.

The Quad Station also maximizes available facility space due to the streamlined design and compact footprint. Using the Quad Station not only frees up valuable real estate on the factory floor, it increases your worker’s productivity, efficiency and provides the best return on your investment.

Here are few Quad Workstation Facts, each Work Station:

- is height-adjustable from 30” to 36”
- work surface supports up to 750 pounds
- is constructed of 12 and 14 gauge steel
- features an abrasion resistant epoxy powder coat finish
