

NEW PRODUCT  
ANNOUNCEMENT

Andrew WeatherShield™ Connection Protection Enclosures seal and protect connectors from the environment.

## WeatherShield™ Connection Protection Enclosures

For In-Line Connectors, Antennas and Tower Top Devices

Complete your transmission line installation with Andrew Corporation's WeatherShield Connection Protection Enclosure which seals and protects connectors from the environment.

This robust, one-piece weatherproofing enclosure offers an additional measure of system protection by providing a high-temperature resistant, watertight seal around the connectors while also helping to dampen vibration that can loosen connector interfaces over time.

The reusable enclosure contains an innovative trifold seal that provides complete moisture block for installed connectors. The ease of installation on hard-to-reach connections and the long-term protection provided by this enclosure makes it the most cost-effective solution available today. The WeatherShield Connection Protection Enclosure takes just seconds to install. Simply place the housing around the connector and snap the tabs together.

No tapes, tools, or shrink tubes are required.

The Andrew WeatherShield Connection Protection Enclosure accommodates Type N and 7-16 DIN connections and is compatible with Andrew SureFlex™ cable assemblies and most brands of standard jumpers.

- Reusable, one-piece design
- Cost-effective alternative to tapes and shrink tubes
- Installs easily, even in the harshest weather environments
- IP 68 rating ensures an effective barrier against ingress of water
- Clean removal
- Fits over connected interfaces
- Helps maintain interface coupling torque
- Fits popular cable brands
- Useable for maintenance of older sites
- Three year warranty

## WeatherShield™ Connection Protection Enclosure for In-Line Connectors, Antennas and Tower Top Devices
