

Jabra[®]
DISCOVER FREEDOM

engadget

“So what separates it from the myriad of like devices? Well, for one it sports 3 speakers for decent stereo audio quality -- for a change -- a couple mics to reduce ambient noise, a motion sensor that turns the set on automatically when you hop in the car, and voice control for just about every control on the device.”

GIZMODO

“The Jabra Freeway Speakerphone is the first of its bluetooth speakerphone brethren to use a three speaker-system to pump out Virtual Surround Sound via Bluetooth. It's smart too, the Freeway automatically turns on when a car door is open and pairs itself with the driver's phone.”

THE VANCOUVER SUN

“At a time when Bluetooth in-car speakerphones risk becoming commodities due to features that don't differ a whole lot unit to unit, Jabra's new Freeway brings a unique new proposition into the market.”

“It's the first of its kind to have not one, not two, but three speakers inside its tiny body.”

Macworld

“If one or two speakers just isn't doing it for your car's Bluetooth speakerphone, then hold onto your steering wheel: Jabra has announced the Freeway, a model that boasts an industry-first *three* speakers.”

red dot award: product design 2011

The Jabra FREEWAY is a winner of the red dot award: product design 2011 for its outstanding design by a 36-member jury. The red dot is an internationally recognized quality label for excellence, honoring only products that incorporate intelligent design.
